Cover: The Thirty-Third Biennial Convention was sponsored by Mu Chapter. Shown on the cover is Mu's house at #10 Bryce Lawn, close to the University of Alabama campus.

The GEAR is the official publication of Theta Tau, National Engineering Fraternity and is published fall and spring. The magazine is an educational journal devoted to matters of Fraternity interest and is sent at no cost to alumni whose addresses are on record. Send change of address to 13 Sona Lane, St. Louis, Mo. 63141. The GEAR is printed by Compolith Graphics and Maury Boyd & Associates, Indianapolis, Indiana. Third class postage has been paid at Indianapolis, Indiana.

The Thirty-Third Biennial Convention

The Thirty-Third Biennial Convention was held December 27-30, 1980 at the Stafford Inn, in downtown Tuscaloosa, Alabama, not far from the University of Alabama campus. Mu chapter proved to be wonderful hosts, even arranging for a few flakes of snow to drift across the sky on the afternoon of December 26 to make all the Northerners in the group feel at home. The beauty of the Southern architecture at the University of Alabama was very impressive to those of us who had never before been to the Old South.

The convention was called to order by Brother Randall L. Patton of Mu chapter. The following officers were then seated: Grand Regent Stephen J. Barth, Acting Grand Vice-Regent William K. Rey, Grand Scribe Robert E. Pope, Grand Treasurer J. Steve Dozier, Student Member Donald H. Slavik, and Delegate-at-Large George G. Dodd. The doors were guarded by Grand Outer Guard G. Richard Newell, Grand Inner Guard A. Thomas Brown, and Grand Marshal Bruce E. Carlson. The delegates were Paul A. Franson, Alpha, Richard G. Russell, Delta, Linn A. Wiley, Zeta, Randall L. Patton, Mu, Patrick J. Gureski, Xi, Paul N. Hauser, Omicron, Robert W. Faires III, Rho, Bruce W. Brayshaw, Sigma, Dean Bettinger, Tau, David A. Pittman, Upsilon, Christopher H. Bradley, Phi, David M. Adler, Chi, Mark Koepke, Omega, Bernard J. Girardot, Epsilon Beta, Mark Rizzo, Eta Beta, Gregory J. Martin, Iota Beta, Timothy C. Allred, Kappa Beta, James M. Overton, Lambda Beta, and Christian R. Heer, Nu Beta. The Alternates were Henry V. Holec, Alpha, Elizabeth Byers, Delta, Kevin L. Stevens, Zeta, Jeff Owen, Mu, Mike Farmer, Xi, Jacqueline A. Spaulding,

OUTSTANDING DELEGATES

1954, Robert E. Pope, Zeta '52; 1978, John R. McClellan, Mu '79; 1980, Randall L. Patton, Mu '82; 1976, A. Thomas Brown, Mu '77; and 1958, George G. Dodd, Zeta, '60.

Omicron, Michael P. Burke, Rho, Robert A. Collins, Sigma, Arthur Partin, Tau, Kenneth Evans, Upsilon, Ross W. Stevens, Phi, Bradd D. McCaslin, Chi, Jeff Hocke, Omega, Keith Sisson, Epsilon Beta, John Evans, Eta Beta, Paul F. Gilgallon, Iota Beta, Ed Barels, Kappa Beta, R. Pratt Cherry, Lambda Beta, and Scott M. Hayman, Nu Beta. Other official attendees were Charles W. Britzius and William K. Rey, Past Grand Regents, Richard A. Rummelhart, Gear Editor, Craig S. Huff, Central Regional Director, A. Fort Gwinn, Southern Regional Director, and Dale G. Larsen, Western Regional Director. Officers' reports were followed by an Opening Dinner, at which Past Grand Regent William K. Rey, Mu '45 was the keynote speaker. Brother Rey's speech put all in the mood for a united effort to achieve success in the tasks before us.

On Monday morning, December 29, Brother Monica Gureski delivered a seminar on "Marketing Applications for Theta Tau." Brother Gureski, Xi '79, is enrolled in the MBA program at the University of Wisconsin-Madison. Her remarks focused on rushing, and how Theta Tau can be presented in a manner that will attract the quality people that Theta Tau needs. Hopefully, the seminar has caused a rash of clear thinking, and all of our chapters are growing rapidly.

The Convention Banquet was highlighted by another Mu alumnus, J. M. "Mickey" Trimm, Mu '72. Mickey gave a very entertaining and flattering view of the difference between a Theta Tau and a non-Theta Tau. This was followed by the awards. G. Richard Newell led off with the Best Newsletter Award. Second place produced a tie between Lambda Beta and Xi. First place went to the sole possession of Sigma Chap-

Grand Regent Barth and Delegate-at-Large George G. Dodd relax as delegates are registering for the convention.

Jack C. Brown

The spirit of brotherhood and cooperation was never better.

ter. A. Thomas Brown presented the Best Display Award to Eta Beta for a folding, three-dimensional, multimedia affair complete with photographs, artifacts, and a slide show. Don Slavik stepped forward next with the award for Best Presentation, which also went to Eta Beta. In spite of the fact that they had had some trouble with their slides, it was a well deserved award. The Founders' Award, which is presented to the most improved chapter over the previous biennium, was given by Brother Bruce Carlson to Mu. The highest award in the Fraternity, the Erich J. Schrader Award, was presented by Delegate-at-Large George G. Dodd. This award, presented to the best chapter in the Fraternity, was presented to Kappa Beta. Steve Barth closed out the awards by announcing the winner of the only individual award of the Convention. The Outstanding Delegate Award was presented to the Delegate from Mu chapter, who was also the chairman of the convention committee, Randy Patton. Brother Patton joins a select group of men, among them three other Mu members, and national officers Robert E. Pope, George G. Dodd, and A. Thomas Brown.

The last day of the Convention was taken up with final resolutions, plans for the next convention, the election of officers. The list of new officers may be found on the inside front cover of this issue.

Financially, the Convention made some hard decisions. The rates for initiation fees and dues were raised from the present \$35.00 for initiation and 38.00 per year for dues to \$50.00 for initiation fees and 52.00 per year for dues.

The Convention set aside the sum of five thousand dollars from the Founders' Fund specifically for the purpose of establishing new colonies. One National officer will be appointed for the express and single purpose of establishing new colonies.

The next Convention will be in August, on a trial basis. It will be a combination of the various Regional Conferences. The cost of this Convention will be limited to \$10,000 in an attempt to save money on conferences and improve communications between the chapters. Xi chapter will host the Convention.

The Schrader Award requirement of improvement over the last Biennium was removed.

The *Gear* will publish only three issues this Biennium. To improve communications, a newsletter format will be used and distributed between each regular

issue. The Editor of the *Gear* has been instructed to develop a plan for soliciting and selling advertising, professional cards, and sponsor's listings.

Three levels were established for the alumni relations program: the Grand Regent is to appoint a Council member to coordinate the alumni relations program; the Regional Directors are to be in charge of all alumni and chapter relations in their regions; and the Alumni Field Secretaries are also to promote extension and colonization in coordination with the National Officer in charge of colonization.

The petition for colony status from Xi Beta Fraternity at the Iowa State University in Ames, Iowa resulted in Theta Tau's newest Colony.

One of the last orders of business during the convention was a resolution designating the Thirty-Third Biennial Convention as the George G. Dodd Convention. The resolution passed by a unanimous vote, followed by a hearty round of applause.

Brother Dodd, a 1960 graduate of Zeta chapter, has a long history of service to the Fraternity. He held many offices as an active member at Zeta, having served as pledge trainer, rush chairman, marshal, treasurer, and regent. At the Twenty-Second Biennial Convention in Madison, Wisconsin in 1958, he was elected Outstanding Delegate, sharing the honors with Raymond J. Sullivan, Gamma Beta '59. The Spring '59 issue of the *Gear* notes that the Credentials Committee named four delegates "who were rated superior in their knowledge of the Fraternity." One of them, of course, was Brother Dodd. He also chaired the Constitution and Bylaws Committee, and presented that committee's recommendation to the Convention that our membership requirements drop all reference to race. This recommendation was accepted.

On the National level, George has been elected to the offices of Grand Outer Guard (1966-68), Grand Inner Guard (1968-70), Grand Vice-Regent (1970-72), Grand Regent (1972-76), and Delegate-at-Large (1976-80).

Brother Dodd is also a member of Tau Beta Pi, Eta Kappa Nu, Sigma Pi Sigma, Sigma Tau, and Alpha Phi Omega.

When George goes to work, he becomes Dr. George G. Dodd, Assistant Department Head of the Computer Science Department of the General Motors Research Laboratories in Warren, Michigan.

Tim Allred accepts the 1980 Schrader Award for Kappa Beta from George G. Dodd.

The Executive Council for 1981-2:

Robert E. Pope, Zeta '52
Donald H. Slavik, Xi '78
John W. Catledge, Kappa Beta '75
Stephen J. Barth, Lambda Beta '67
J. Steve Dozier, Lambda Beta '71
A. Thomas Brown, Mu '77
Randall L. Patton, Mu '82
G. Richard Newell, Omicron '76
Charles W. Britzius, Alpha '33

TEN YEARS AGO

The *Gear* skipped an issue or two. We sure hope that this does not happen again.

J. W. Howe retired from the faculty of the University of Iowa.

TWENTY YEARS AGO

Charles W. Britzius was Grand Regent. (Some people never give up. Aren't you glad they don't?)

Paul Mercer and J. W. Howe retired as *Gear* Editors after thirty-two years.

TWENTY-FIVE YEARS AGO

The Fraternity has twenty-four chapters and eight of these own houses. Compare this to today's twenty-three chapters and seventeen houses.

THIRTY-FIVE YEARS AGO

Theta Tau recovers from World War II. Omicron and Xi are reactivated, and chapters across the country are filled as veterans return to interrupted college careers.

FORTY-FIVE YEARS AGO

The first Convention to be named after a member was held: the Jamison Vawter or 12th Biennial Convention.

The Executive Council authorized for the first time the establishment of voluntary alumni dues.

FIFTY YEARS AGO

Harry W. Bull, Tau '32 designs, builds, and drives the first rocket powered sled in the United States. Brother Bull attained the astounding speed of eighty-five miles per hour on an ice covered course.

Convention '81

The Thirty-Fourth National Convention will be hosted by Xi Chapter in Madison, Wisconsin from August 13 to 16, 1981. Xi assures us that this Convention will be well worth attending.

The entire Convention will be held in the facilities of the University of Wisconsin Short Course Program on the shores of Lake Mendota, a fifteen square mile lake adjoining the University campus.

This Convention will focus on national unity and brotherhood. There will be some business of the nature usually reserved for the Biennial Conventions, but there will also be several regional workshops on the topics of officer training, professional development, rush, finances, etc. This presents an excellent opportunity for student-alumni interaction, and alumni contributions in areas of expertise. Recent Conventions have seen a majority of alumni present come away with an office or project; but as there will be no elections at this Convention, everyone will be quite safe in attending.

Xi is promoting the idea of alumni bringing along spouses and families. Those of us who have gone to Madison before know that it lies in beautiful country, and has a lot to offer in scenery, activity, and culinary delights. Lake Mendota offers canoe and sailboat rentals and swimming. Downtown Madison is within walking distance; and a zoo, arboretum,

and several state and local parks and campgrounds are within easy driving distance.

Registration will begin on Thursday afternoon, August 13th. Business sessions will be held on the 14th, 15th, and 16th of August. Registration costs will be \$35.00 per person for meals, lodging (based on a triple occupancy room in the Short Course dormitories), and Banquet ticket. Meals include continental breakfast at the Short Course facilities, lunch at the Union, and cookouts for dinner. If desired, more private rooms can be obtained at the Union for a slightly higher cost.

Social events start with a get-acquainted session Thursday night before dinner. Friday afternoon, Xi is planning a softball game and a beer and bratwurst cookout. The Convention Banquet will be preceded by a social hour on the Union patio, overlooking Lake Mendota.

Convention is a great chance to see Theta Tau as a national professional engineering fraternity. It is also a good time to get a recharge on the Theta Tau spirit. We hope to see the largest Convention yet this August and look forward to making many new friends. Whether you can make only part of the Convention or all of it, plan on being in Madison this summer. Requests for further information or reservations should be sent to Robert E. Pope at the Central Office, 13 Sona Lane, St. Louis, Missouri 63141.

Editor's Corner

Being a new *Gear* Editor, and coincidentally from Omicron chapter, I can think of no better role models than J. W. Howe and Paul Mercer. Together over the years, they put out over sixty issues. Their thirty-two years of service in one office is exceeded only by Erich J. Schrader's thirty-five years as Grand Scribe. Although the Executive Council has not requested that I sign a long term contract, I am confident that they wish, as I do, that the quality of the *Gear* can be carried on. For some of our alumni, the *Gear* is the last contact with the Fraternity. It is to these brothers that I wish to address each issue of the *Gear*, in order to reaffirm those special bonds that we all have in Theta Tau. It is my hope that the *Gear* may be a vehicle for drawing all Theta Taus together, to let us know that no matter what our chapter, we can count on the fact that being a Theta Tau means having a group of brothers who are willing to support each other in our efforts to establish engineering as a profession of the highest order.

Respectfully,
Arthur T. Petrzelka

The more things change, the more they stay the same, as is evidenced by this excerpt from the Fall, 1936 edition of the *Gear*, entitled:

HELP! HELP!

Not the least of the problems of editing *The Gear* is that of securing

suitable articles and news relating to the Fraternity with which to fill the gapping pages of each issue. This material in the main must be gathered from all over the United States and frequently from far off countries, either through solicitation or preferably through voluntary co-operation of members. For some reason, perhaps because the slowly returning prosperity puts greater demands on time—at least that can serve as an excuse until a better one is found—the supply of acceptable material for *Gear* publication has dwindled considerably of late.

To curb this tendency and once more get things headed in the right direction, we come now with an appeal for your help in supplying news and articles which properly belong in the pages of *The Gear*. While the general character of the material we can use is obvious, it might be helpful to list the topics we think especially desirable. Ponder on these subjects as you read them. Possibly they will suggest some news or some story you should share with the Fraternity through the magazine.

1. Articles on engineering achievements of Theta Taus. This refers to write-ups of engineering works of outstanding merit, unusual design or widespread general interest to the completion of which Theta Taus have made major contributions.

2. Character sketches or biographies of Theta Taus who have attained success in their chosen fields of engineering. Also similar sketches of members who have contributed exceptional service to the fraternity.

3. Articles dealing with professional questions—aims, ethics, etc.

4. News items or feature articles of general interest on your college of engineering. This would include stories on new buildings, new equipment, new courses, new methods of teaching and other kindred subjects.

5. Feature articles on your chapter with regard to special accomplishments deserving of more space than usually given to chapter letters.

6. Special articles on fraternity problems—rushing, pledge training, finances and the like. Usually, these will be of a general nature, but specific examples and experiences are always of a great help and interest.

7. News items concerning Theta Tau, other professional engineering fraternities or the fraternity world in general.

In many cases photographs are a natural adjunct to the story and as such should always be included where possible. Chapter outings, dances, parties, homecomings, and alumni reunions offer opportunities for pictures which might appropriately be used with chapter letters or elsewhere in *The Gear*. Since photographs and illustrations add greatly to the readability and attractiveness of any magazine, we try to use as many as our slender budget will allow. However, we must depend on chapter correspondents and other interested members for our photographs even more than for articles and news items.

So please remember *The Gear* throughout this year and the years to come. Send in your material—articles, clippings, notes, or photographs—as it comes to you so that for each issue we can always present a good assortment of the things that make the magazine more valuable to the Fraternity.

The Challenges of Change

Professor William K. Rey, Mu '45
PAST GRAND REGENT

Delegates and Alternates to the Thirty-Third Biennial Convention, other Theta Tau members and alumni, and guests, it is a privilege for me to join you this evening. As a representative of Mu Chapter and The College of Engineering at The University of Alabama, I am pleased to welcome our visitors to Tuscaloosa and our campus and to express the hope that your stay here will be both profitable for Theta Tau and enjoyable for you.

When Grand Regent Barth invited me to attend this convention, his letter of invitation contained the sentence, "We must establish goals and determine our course or Theta Tau will cease to exist in the next few years." When host committee chairman, Mu Chapter Regent Randy Patton, asked me to be the speaker this evening, I recognized a brother in desperate need and readily agreed to help him. After searching for an appropriate topic or subject that might be in keeping with Grand Regent Barth's statement, I decided to share with you a few thoughts about the Challenges of Change. In the reports you heard this afternoon, you have heard references to some of these challenges by the national officers.

About 2500 years ago, Heraclitus, the Greek philosopher from Ephesus, who was known as the weeping philosopher, wrote "There is nothing permanent except change." Heraclitus believed that everything was in a continual state of flux—or movement—and that any idea of permanence about anything

was an illusion of the senses. Although Heraclitus had some other ideas that have not stood the test of time, I believe that his observation about change is as applicable today as it was 2500 years ago—There is nothing permanent except change. If this is in fact true, each of us should be prepared for change in all types of activities.

Much more recently, less than 20 years ago, a series of essays by Eric Hoffer was published under the title "The Ordeal of Change." Some of you may remember Mr. Hoffer as the former migratory field worker, goldminer and longshoreman who became a research professor at the University of California and was the subject of twelve half-hour programs on national educational television a number of years ago. In one of his essays titled "Drastic Change," Mr. Hoffer discusses the fear and inner trembling with which we face change because, "Drastic change is a profoundly upsetting experience; when we face the new and unprecedented our past experience and accomplishments are a hindrance rather than an aid." He states that we can never be fit and ready for that which is wholly new. However, Hoffer also develops the theme that change can be used to release our energies and turn us toward effective action when we have an abundance of opportunity and a tradition of self-reliance.

One week ago tonight, at a small dinner party, I was talking with a retired army colonel who has become a very successful local busi-

nessman and I asked him what had led to his success. In his response, he effectively combined the philosophy of Heraclitus and Hoffer when he told me, "First, learn to change with the times, and second, prepare to turn affairs over to the younger generation."

With the ideas of Heraclitus, Hoffer & my local friend as background, or as an introduction, I want to briefly discuss with you four of the challenges associated with change—challenges that we must face whether as delegates considering a change in some area of operation of our fraternity or, as engineers, a change to a new method of analysis or a new product, or, as citizens, a change in government.

A story I heard some time ago illustrates the first challenge I want to discuss. A conference on mental health was being held on our campus and the participants included a number of clergymen. At the close of the conference, a reception and banquet were held in this hotel. During the reception, a Catholic priest who was attending the conference had just obtained a drink at the bar when a Baptist minister friend arrived and joined him. The priest asked his Baptist friend, "Bob, could I buy you a drink?" With some indignation, the Baptist minister replied, "No, I would just as soon commit adultery as to have that filthy stuff touch my lips." Whereupon, the priest put his drink down, took his Baptist friend by the arm and said, "let's go—I didn't know we had a choice."

There are some concepts, ideals and methods of operation that have stood the test of time and will continue to serve as sound foundations for future success. However, there are other procedures and functions which may have been very appropriate and the best available in the past that need to be changed for today and the future. I suggest that one of the challenges of change is to recognize when we do have the choice of making a change. Don't think that there is only one way to accomplish an objective *just* because it has been done one way for 50 or more years.

I'll use another story to illustrate a second challenge. A church in another town was having a series of revival meetings and a sign had been erected outside the church with the invitation, "If you've given up sin, come on in." Below this invitation, in what appeared to be bright red lipstick someone had added, "If you haven't, call Virginia at 642—."

This is a different type of challenge—a challenge in which we have an obvious choice coupled with the temptation to retain our old ways—instead of embarking on a new and what may prove to be more difficult path. In another book by Eric Hoffer titled "The Temper of Our Times," he wrote, "Broken habits can be more painful and crippling than broken bones." This second Challenge of Change involves a willingness to attempt to travel the difficult, rock-strewn road instead of the easy, paved highway when faced with an obvious choice.

Since a few of you were polite enough to laugh at my other stories, I'll introduce the third challenge by way of a tale that requires your vivid imagination. This tale involves the proverbial engineer who was shipwrecked and found himself on a small, uninhabited, tropical island. He managed to stay alive all by himself on that island for a year by using his engineering ingenuity to provide shelter and eating the fish he could catch and the fruit that grew in abundance on the island. After a year on the island, he was scanning the horizon one morning when he discovered a luxury yacht was anchored some distance from

the shore and a snorkel tube was moving through the water toward the shore. He raced down the beach, keeping the snorkel in view, and as the swimmer reached shallow water, he almost couldn't believe his eyes as a beautiful young woman in a skin-tight wet suit emerged from the waves. He met her as she reached the shore and he quickly poured out his story of shipwreck and lonely survival for a year. After listening to his story, she said, "After a year by yourself on the island, I'll bet you would enjoy a cigarette." With that, while he watched in amazement, she unzipped a waterproof pocket on one arm and removed a dry pack of cigarettes—unzipped a pocket on her other arm and removed a lighter, lit the cigarette and handed it to him—in two or three long puffs he consumed the entire cigarette. The swimmer then said, "After a year by yourself on this island, I'll bet you would also enjoy a drink of bourbon." While he watched in utter disbelief, she reached down, unzipped a small pocket on the thigh of her wet suit and removed a half-pint of bourbon which she handed to him and he consumed in three or four big swallows.

Whereupon, the swimmer began to slowly, seductively, open the long zipper that ran down the front of her wet suit as she said, "After a year by yourself on this island, I'll bet you would really enjoy playing around." Our engineer's eyes literally popped out as he scanned her figure in the revealing wet suit and he said, "Good Lord, lady—don't tell me you've got a set of golf clubs in there, too."

For this third Challenge of Change, I suggest that, as engineers, you carefully examine alternatives that may be available before making a choice. As engineers, you have the analytical talent, the educational background in obtaining and organizing data that many others lack. If you use these talents and education to systematically examine and evaluate alternatives instead of jumping to the wrong conclusion like our shipwrecked friend, I am confident that you will make the right decision when you decide a change is necessary.

A final challenge that I'll introduce with another story that also requires a vivid imagination. A small church in rural south Alabama has two attractions of which it is justifiably very proud. The first is a large, ornate, very beautiful and very expensive crystal chandelier that is suspended over the sanctuary immediately in front of the balcony. The second attraction is Miss Parton—a beautiful, young, single woman with some of the same physical characteristics as her namesake, Dolly. Miss Parton had been courted, at one time or another, by every bachelor in town—and none of them had met with any success. She had a habit of always arriving late for the Sunday morning worship service at this church and then walking down the aisle to the front pew so that everyone present could see not only her but also her newest outfit. On the Sunday morning after Christmas she arrived at the church wearing all her new Christmas finery but she was so late that all of the seats downstairs, including those in the front pew, were already occupied and she had to go up to the balcony. The preacher, Brother Roberts, had already started his sermon and, as she was walking down the rather steep steps in the balcony, she caught one of the heels of her new shoes in the rug, tripped, and before she could regain her balance, she flew over the balcony rail. The chandelier saved her—instead of crashing to the floor, her heels caught in the chandelier and she found herself suspended, upside down and rather exposed, over the congregation. As the congregation began to turn to view the cause of the disturbance, Brother Roberts, up front in the pulpit, recognized the seriousness of this situation and interrupted his sermon to quickly announce, "Let's everyone bow their heads, cover their eyes, and pray for Miss Parton in the moment of her embarrassment. If anyone looks up before the end of my prayer, I'll call upon the Lord to strike them blind." Two former suitors of Miss Parton, Jack and Tom were sitting downstairs three rows behind the chandelier and did bow their heads and cover their eyes—but, in about 10 seconds,

Jack poked Tom and whispered, "Tom, I'm going to risk one eye."

Now then, this last Challenge of Change is that associated with risk. As I've already mentioned, traditions are important and proven methods of operation need careful, informed examination before they are discarded for newer modes. However, risk is involved whether we retain the old or adopt the new. If we retain the old, we run the risk of facing the same type of future as the buggy whip manufacturer when the automobile appeared on the scene—the risk of slow death if we are unwilling or unable to adapt to changing times. On the other hand, if, after careful analysis of all factors, we decide a change is warranted, we face a risk like that of the Ford Motor Company when it introduced the Edsel—a failure after making the best possible market analysis and using the best available engineering design procedures. This Challenge of the risk associ-

ated with change requires not only the talents, education and careful study mentioned earlier but a new ingredient—courage. The courage that comes from the experience of taking risks and demonstrating that the new may work better than the old—the type of courage called for in the open motto of Theta Tau—"Whatsoever thy hand findeth to do, do it with thy might."

My wife repeatedly has reminded me that the best after dinner talks are the shortest. As a classroom teacher for over 30 years I became accustomed to having students look at their watches when the end of the period approaches—although I never did become accustomed to their holding their watches up to their ears to determine if they were still running. In closing, I want to express my disagreement with the prophets of doom who have been forecasting the end of the fraternity system for the last 30 or 40 years. Just as the buggy whip manufac-

turer who failed to recognize the importance of the motor car is no longer with us, a fraternity that refuses to change with the times will die a slow death. Over the last 76 years, Theta Tau members have demonstrated that they can recognize the circumstances when they have a choice; that they can, when necessary, make the difficult choices; that as engineers they have the intelligence and problem solving analytical tools and ability to determine when change is desirable; and that they have the courage to face these challenges and take the risks required to continue to provide a dynamic organization that makes a positive contribution to the engineering education process. I have faith that the delegates, alternates and national officers assembled here in Tuscaloosa will continue to accept the Challenges of Change and provide the leadership that will carry Theta Tau into the next century.

In Memoriam
